**THE COMPLETE WORKS OF
PROF. V., VOLUME ONE
RELIGION, ATHEISM, AND
SOLIPSISM: IS LIFE A DREAM?**

by Prof. V

This work was originally two separate essays. But since they complement each other, they appear here together for the first time.

Part One—RELIGION AND ATHEISM—is a clear, unbiased logical discussion of both beliefs; a strictly *fair* presentation of all the major ideas concerned. Written with the younger reader in mind, it is adult enough for any mature reader who is pondering these, the oldest philosophic questions of all.

The problem of the definition of God (and a God's relation to humankind) is clearly presented.

Part One ends with the subject of tolerance—the only logical way for rational humans to live, but then adds a final surprise twist to the essay!

Part Two—TWO WORLDS—covers the favorite philosophic belief of Socrates, Edgar Allan Poe, Lewis Carroll (and his “Alice”), and poetess Emily Dickinson: Is life a dream?

The ponderous word “solipsism” is used for this idea—but the concept of All being an illusion is basic and simply understood.

Far more clearly than the works of George Berkeley, TWO WORLDS dazzles the reader with a series of “Proofs”. The Proofs are common everyday objects and situations—yet looked at in a new way.

As the reader considers the many Proofs, a clearer picture of the truth of this Dream-like World around us emerges.

(continued on back flap)

(continued from front flap)

A surprising section deals with Occult matters—and as an extra bonus, some long-accepted “scientific” ideas are shown to be false.

The work's “Additional Notes” section presents even more Proofs.

The book ends with a hauntingly eerie short-story—HUMOR—exposing *all* religions and *all* philosophies as the ultimate in Cosmic Irony.

PART ONE
RELIGION AND ATHEISM

INTRODUCTION

Do you know what is one of the most amazing things in this world we live in?

It is that any two people can look at something—and see it differently!

They may see it just a little bit different—or a whole lot different.

Just think for a minute about some of the things you like or believe in: a popular TV star, a sport or game, even your favorite food.

Now you know some of your friends do not agree with you at all, right?

They say: “How can you like that singer? I think (he/she) is awful!”

Or—“Ugh! Do you really eat *that*?” (spinach, beans, liver or anything else.)

But wouldn’t this world be dull if we all thought alike on everything? Maybe it is better this way—more interesting and more fun.

Sometimes we can talk to people who disagree with us and change their minds.

Maybe they never really tried a food cooked in a certain way. They try it and they like it.

Maybe they make you change your mind about something.

There certainly is nothing wrong with changing how

we think about something—if we see it in a new or different way.

TV actors, games, and food are important—but, of course, there are other things people cannot agree on either—like ways of living.

Even the laws of our Town, State and Country go through lots of discussions and arguments by hundreds of people in our Government before they become Laws.

If you read the ideas on both sides, sometimes it is hard to pick one way right away. We have to think about it carefully.

Do you know about the 55 miles per hour speed Law? This is a Federal Law, which means it is for every car and truck driver in the whole country.

It certainly seemed like a good, sensible Law when they first thought about it. Many accidents are caused by speeding drivers. If every driver slowed down to 55, there would be less accidents.

That part of it seems true enough, doesn't it?

But there was another side to this idea.

Some drivers—mostly truck delivery workers—do a lot of their driving through isolated or almost-empty places—like in deserts and through big flat farm lands. In these places the drivers can see for miles around and it is safe to drive a bit faster than 55 miles per hour.

The faster a driver can deliver the goods, the more money they can earn. Not to mention that the goods and products will get to your town's food stores, hospitals and so forth faster.

So these drivers said: "The 55 mile per hour Law may be good in big cities or on crowded highways—but on desert or farm roads—with very little traffic—we should

have the right to go faster. We can make more deliveries and earn more money for ourselves and our families!"

So you see, there were *two* sides to this idea—even though the Law seemed so good and perfect at first.

As you get older, most people find there are two (or more) sides to *every* idea.

WHAT IS ATHEISM?

Most people believe in a God. We have to say the words "a God" because all over the world, there are many completely different ideas as to who or what God is. Some people even believe in many Gods.

Each of these different ideas of what God is, is called a "religion." If you look up that word in the encyclopedia, it will say that there are many different religions.

Even in your own town, or nearby, there are different kinds of churches where people go with different ideas.

Even people who use the same religious Book—or Bible—understand it many different ways.

The Bible is used by Christians. These are people who believe in the teachings of the man Jesus in the Bible.

But there are different kinds of Christians.

Some are Catholics, who also worship the woman Mary, who the Bible says was the mother of Jesus.

Some are Protestants. These people use and read the exact same Bible as the Catholics—but they see things in a completely different way.

And not all Protestants agree with each other—there are hundreds of different Protestant religions—each of which disagrees with all the others.

The Jewish people believe in just the first half of the Christian Bible—the OLD TESTAMENT.

They don't believe in Jesus at all—or anything the second half of the Bible—THE NEW TESTAMENT—says about him.

Isn't that strange?

Both Christians and Jews use one-half of the SAME book—but completely disagree with each other!

Then there are people who don't believe in the Jewish/Christian Bible at all—they have other different Bibles, describing their God in different ways.

There are Buddhists, Muslims, Taoists, and others.

As you can see, the subject of religion is complicated and confusing.

There really are hundreds of different religions—and ideas of God—in the world.

Some religions are very popular in just one special place—a State, or District, of a certain land.

Sometimes, right near by, are people with a completely different religion.

Unfortunately, sometimes people try to force their ideas on others and their countries have long wars.

If you look in the encyclopedia for articles on "Palestine" or "North Ireland" you can read about some of these wars that have been going on for many years.

So what is atheism?

Is atheism just another religion?

Not exactly.

Atheism is the opposite of all the hundreds of religions in the world today.

Atheism sort of takes the other way around to look at God.

Instead of trying to describe what God is, atheism says there is no God—there *are* no Gods of any kind.

What makes an atheist say that?

That is a good question.

Let's look slowly and carefully at atheism and see if we can figure it out.

The first thing to notice is that there are many atheists in the world right now.

It is not a new idea.

Atheism is as old as the first religion.

When some early person first said: "I believe there is a God who made the whole world!"—that person was immediately answered by another person who said: "I don't believe this world was made by any God!"

That was the first atheist.

Even adults are surprised to learn that many famous people all through history claimed to be real atheists.

Here is a little list of some:

John **ADAMS**
Jane **ADDAMS**
Susan B. **ANTHONY**
Isaac **ASIMOV**
Clara **BARTON**
Ludwig Von

Now remember how we mentioned before how all people see all ideas in different ways? That was why there are so many different religions. Well, atheists see atheism in different ways too. All those people listed above became atheists in different ways or for different reasons.

To get an idea what atheism really is, let's take the example of Santa Claus.

Many little children are taught that Santa Claus—a fat, jolly fellow in a red suit—visits our houses on Christmas Eve and brings us presents. (Even beliefs in Santa Claus are different all over the world—he looks and acts in different ways—and visits houses on different days—not just December 24th—in other countries.)

So, being taught about Santa Claus by their parents, children believe in him.

They wait for him. They play with the presents he brings.

But, as you know, one day something happens—a child learns there is no Santa Claus.

It was just the child's parents or guardians who were bringing the presents all those years—pretending it was from this person called Santa Claus.

Naturally the child on first learning this became hurt and confused.

Many cry and get deeply depressed for a long time—not understanding why their parents had told them so much about this person Santa Claus, who it turns out, was not real at all.

Why parents tell their children this, is a mystery.

I really don't know why.

What is even stranger, is that some of those same

children who were so hurt and disappointed and upset when they learned there was no Santa—he was just a myth, or make-believe—some of those same children who grew up to have children of their own, tell *their* children about Santa!

Now that is a double-mystery!

Not all former-Santa believers do that to their own children, of course. Only some.

So, now you can see, when you give up your belief in Santa Claus, you have become a sort of atheist—you don't believe in a magical, wonderful being anymore.

Some former-Santa believers carry this idea one step further.

They say: "If my parents lied to me about Santa Claus—maybe they lied to me about God too!"

Both God and Santa are understood to be magical spirit beings who watch over us and give us good things.

But sometimes young people who believe in God, ask God for certain things—like they would to Santa Claus.

Maybe they ask for a new toy.

Or, help to pass a test in school.

Or, maybe if they, or a family member is sick, they ask God to cure them.

This is praying.

Sometimes the family member recovers—gets over the illness. The child is happy God granted his request or prayer.

But sometimes the family member does not get better—even after long, serious praying—and dies.

Apparently God did not answer this prayer.

Some young people become angry at God at this time.

They say there can't be a God if he let that person die in pain.

The former-God believer is now an atheist.

WHO IS GOD?

Did you know that long ago people thought God and Heaven was just above the clouds high in the sky?

That was before the days of telescopes and airplanes, of course.

Even THE OLD TESTAMENT says: "The clouds are God's foot-dust" (Nahum 1:3).

The believer says: "God made the world!"

The atheist says: "Who made God?"

The believer says: "God always was—he is Eternal!"

The atheist says: "How do you know the universe is not Eternal—always was?"

Some say: "The world exists. It must have a creator. It is perfectly designed and planned by an Intelligent Being!" But some answer: "Designed? Where is the Designer? Earthquakes, volcanos, tidal waves, storms, and tornados can come at any time and do great damage. Where is the design if these things happen to throw everything into confusion?"

Some say: "God is good. God is love."

Others say: "Then why is there so much evil in the world—disease, crime, violence? Why does the God allow such things? And if he is all-powerful, he is allowing it—and could stop it anytime."

Some philosophers say: "Ok, maybe there is a God—but he is not so perfect—he may even be evil—or maybe he no longer exists himself—but he did at one time."

Most books say the first Gods were the sun, moon, and stars, and rain themselves. These were big mysterious things that were always very important to all life on earth.

The sun is needed for heat and light. The moon gives light too. The stars have always been used by travelers for direction-finding. And of course the rain is absolutely necessary.

Many millions of people in different lands actually prayed to and worshipped the sun, moon, stars and rain. Some people today still do so.

There can be little argument these Gods really do exist—even if they don't answer prayers.

Some people in some lands worship trees, or huge strangely-shaped rocks. Some people worship animals—like the sacred cows in India.

Of course, atheism usually means you don't believe in a personal human-like Superior Being God.

Not many atheists deny the sun or trees exist.

We mentioned before about atheists being that way for different reasons.

Like the child's reason for not believing in Santa anymore, some just say: "There is no proof Santa Claus exists—it is just illogical he could visit every house on one night (and so forth)."

Logic is a way of thinking. We see a connection between two events or situations. We can see one CAUSED the other to happen.

If we walk or play a long time we get tired. That is Cause and Effect.

But we just can't see a Cause of how a God first came into being.

So if there is no Cause and Effect, we say the connection between two ideas is not logical.

Some see no connection between the universe and a God. So they reject the idea of God.

So logic is one reason for being an atheist—although some things which seem illogical turn out to be true!

Just because the proof of a God is illogical is not a reason not to believe—for some.

Religious people sometimes talk about the word "faith". Faith is a strong belief in something without having any kind of proof at all.

Is it wrong to say you have faith in something or someone?

No, because we all have faith in some things—things we must accept without any scientific proof.

Can you think of some?

Let's start with a very obvious one: We all have faith—a strong belief without scientific proof—that the sun will rise tomorrow and there will be a new day, right?

We plan what we will do tomorrow. We are SURE tomorrow will come—and the day after tomorrow—and so on.

We have no proof there will be a tomorrow. We just BELIEVE very strongly there will be one.

This is faith.

We have faith our heart and lungs will keep working. We don't control the internal parts of our body. We don't have to think about breathing. We have faith our body will work automatically.

We have faith our parents or guardians love us and will protect us and take care of us.

Deep down we have faith going to school is important—even if we hate it at times.

We have faith in our Government—that the people in power are doing THEIR best to see our country is safe—even if we think they might not be doing THE best job at all times.

So having faith in something—believing something without real proof—is not wrong because it is natural to have faith about some things.

But religious people and atheists disagree whether God is one of the things it is ok to take on faith—or should something like that have real proof before we believe it.

So, logic is one reason a person might become an atheist.

We already mentioned another reason—a great disappointment—or an unanswered prayer.

The death of a loved one can make a person an instant atheist.

Here is a third reason:

The confusion of religion. We mentioned before about how there are so many different religions, all disagreeing with each other—yet all are following the same Book or teachings.

How can this be?

Some young people think: “Why should God allow all this disagreement among his believers? Why didn’t he make it clear exactly which particular religious church or group is the one right one, among all the rest? They can’t ALL be right, of course! Why can the Bible be interpreted in so many ways?”

Some say Adam and Eve were real people and Noah was in a big ark and was saved from a real flood. Some people take every word of the Bible to mean exactly what it says.

But some other people say: “No, the Bible stories are just SYMBOLISM. Each event did not happen exactly

that way—the Bible stories are only supposed to tell us in poetry, or simply, the true facts. Maybe there were lots of Adams and Eves. Maybe the flood was not worldwide—just a small one—and of course, no boat (or ark) is big enough to really have taken two of each animal in the whole world into it—when there are thousands of species (or types) of insects alone—not to mention thousands of types of birds, and so forth.”

So why all this confusion? How does God want us to understand the Bible?

Some people only believe certain parts of the Bible. Others say you must believe every single word.

If the Bible is God’s Instruction Book, why can’t we clearly understand what it all means?

The strict believers say there are no errors in it—no contradictions.

Other believers admit there are many errors in it—and 6,000 contradictions. (Which have been printed in many books over the years.)

But those people say: “Of course there are errors in it. It was written by MEN. Men are not perfect—even though God is. But it is the best Guide we have to knowing about God. The Bible was written by MEN—but it was INSPIRED by God.”

As you can see, there is some confusion about what that word “inspired” means. Does it mean God actually dictated or gave each word of it to a man to write down? Or does it just mean God allowed men to write things in it anyway they wanted?

This is one of the things the religious people disagree with each other all the time.

This confusion of the Bible and the beliefs of different churches leads to something else.

Sometimes a young person decides to read the whole Bible straight through—just to become a better believer.

The Christian wants to read both the OLD and NEW TESTAMENTS.

Well, even the most religious people admit there are many strange stories in the Bible. And most are very hard to understand.

There are many violent parts. Some verses give details on actual tortures people did to each other.

There are many crude sexual stories in it.

There are a lot of strange dreams and magic in it.

Some people even think there are flying saucers and aliens from other worlds in it!

They say everytime a verse says “God’s great voice came out of a cloud”—or from a “fiery flying chariot”—that it means Jehovah—the God of the OLD TESTAMENT—and his angels—were really human-like aliens in spaceships—and not spirits or phantoms at all.

There are lots of books on this subject you can find.

So, sometimes just trying to read the Bible is so confusing, a young person just must reject the whole thing. The person may not become an “instant atheist”—but they could become what is called a “deist.”

WHAT IS A DEIST?

A deist is a person who believes in a God (or Gods) but does not believe in any written stories or Bibles about the God.

In other words, you form your own idea of God.

You don’t take any of the ideas from the Bible—like

God is always in a cloud, or has a great thunderous voice, or kept speaking to certain people.

You just say: “I think this world must have been made by some kind of intelligent Power. Maybe this Power does not have a human shape or voice at all. Maybe it is just a force—or energy—like electricity. Maybe it is the life-force in all living things. Maybe it is Nature itself—or the chemical in our cells or just something in the air or far out in the universe.”

This is not a “personal” God this believer is describing—but it is a kind of God.

But even a person who believes in this Cosmic—or Universal—non-Bible God, has the same problem as those who believe in any other Gods:

Is the God good or evil?

Again, it is just not fair to say there is no evil in this world. There is crime and violence and disease all over. If God is not evil, why does he allow it?

If God is evil, then how can there be goodness and kindness and love in this world too?

If God can’t control or do away with all evil, then he is not all-powerful.

If a Being is not all-powerful, then how can he be a God?

Will this God answer prayers? If not, why not?

The old problems just keep circling around and around again, don’t they?

Are there any other reasons a person becomes an atheist?

Yes. Some people quit their church and became atheists when some TV ministers got involved in big scandals.

WHAT ABOUT GOOD AND EVIL PEOPLE?

Are all God believers "good" and all atheists "bad"?
Are all criminals atheists?
Are all the people in jails atheists?
Of course not.

Strangely enough, it turns out that being a God believer or an atheist has nothing to do with how some people act.

Since about 90% of all people are God believers and only 10% atheists, that means that 90% of all the people in jails are true believers in God.

They believe in God—yet they became criminals anyway.

The 10% atheists in jails were non-believers but they too became criminals.

Now of course, Bible believers have the famous Ten Commandments. God says you should not kill or steal (and so forth).

But that does not stop some people from doing those things—even though they really do believe in God and the Bible.

People kill and steal for many reasons—but MOST TIMES those reasons have nothing to do with their belief in God.

Notice those words "most times".

Unfortunately, there have been many crimes and wars done by very religious people who felt they were doing something God wanted—or told them to do.

Even recently, there are cases of quiet, sincere people who suddenly kill their whole families because they say: "God told me to do it!"

So, not killing and stealing may be against the rules in the Bible, but people do it anyway.

Some Bibles say bad people go to Hell.

This is a threat, of course. Be good or you will go to Hell.

But God-believing criminals somehow ignore that threat—even if they do believe it.

Atheists don't believe in Hell. Does that mean they are free to kill and steal?

Of course not.

You see, the laws against killing and stealing are really not necessary to come from a God.

From the earliest most primitive tribes of humans, these two "Laws" were always there—even if they were never written down.

People just naturally object to being killed, hurt and stolen from.

Those are Laws you don't need God to tell you about.

Those are natural Laws of Nature—actually self-defense is a basic instinct in all living things.

No one wants to be killed or stolen from.

No one needed "Ten Commandments" to tell them that.

Humans punish other humans who kill or steal.

When a religious person kills or steals, they must face human punishment and then God's punishment.

When an atheist kills or steals, they must just face human punishment.

Atheists are not free to do crimes—and neither are religious people.

In fact, it is the religious person who has the advantage of making a "confession" and being "forgiven" of all his crimes. Some people feel they can do any crime all week long—as long as they go to "Confession" at the end of the week. The Confession (they believe) clears them of all sins. Atheists do not have this advantage. These certain religious people also believe that no matter what crimes they have done in their life-times, if they could only make a "death-bed confession", they can still go to Heaven, just like a person who never committed any crimes at all.

Killing and stealing are wrong to everyone. But, for whatever reasons, still some people do kill and steal. No one really knows why.

Most agree killing in self-defense is NOT wrong. Is stealing food if you are starving wrong? Isn't that self-defense too?

Speaking of the Ten Commandments, there is another one that people disagree about.

The one that says: "Honor your father and mother".

At first, like the 55 mph speed law, that one seems very sensible.

But there is another side to it.

Unfortunately, many people have parents who are not kind and loving.

Some parents are very cruel to their own children.

They beat them or hurt them in other ways.

Should parents like that be "honored"?

That really is not possible—in some cases, is it?

Are there any other differences between believers and atheists?

Neither is more "good" or "evil" than the other.

What about health?

Are all believers very strong and healthy and all atheists are weak and sickly?

Of course not.

What about luck and happiness?

Are all believers lucky and happy and all atheists un-lucky and unhappy?

Of course not.

There are happy atheists and believers. There are kind atheists and believers. There are generous atheists and believers—just as there are bad or unhappy atheists and believers.

Check that list of famous atheists we printed awhile back. Most of these people were good and kind all their life.

Are all atheists communists?

Of course not.

Some atheists and believers are communists.

Some atheists and believers are not.

So, it turns out the basic difference between atheists and believers are just their belief in God.

Is it important whether you believe in God or not?

If both atheists and believers must live their lives basically the same—they still have to eat, work, play, earn money—what difference is there if anyone believes in God or not?

Remember—some believers know all their prayers are NOT answered—so that is one "advantage" the be-

liever does not have over the atheist. (In wars, thousands of people on both sides are praying for victory, or the long war to end. If there was power to so many praying, the war would quickly end.)

Yes, it is important for you to be either a believer or an atheist.

It is important for you to believe in something you think is right.

It is important for you to say: "I am right about this. I will not be fooled by tricky talk or arguments. I know this to be true, and I will live my life that way."

What is "Tolerance"?

Tolerance is how we treat other people who believe differently from the way we do.

If we think we are 100% right, and the other person is 100% wrong, what should we do?

The answer is: we must both allow each other our beliefs. We must not interfere with EACH OTHER'S beliefs.

They must not interfere with you.

You must not interfere with them.

We all can talk and discuss our beliefs—but we must not interfere with each other's in any way.

This is tolerance.

This is the best and safest way to live.

Knowing you are right is enough.

You are right. They are wrong.

And, as you know, you can still be friends.

✂ ✂ ✂

Are you ready for a surprise?

If a believer believes there is a God, and an atheist believes there is none—is there any other thing a person can be?

Either there is, or is not—right?

Wrong.

There actually is a third philosophy regarding God a person can take.

It is a philosophy where there is a God and is not one—both at the same time!

How can this be?!

Well, it is called "solipsism" and it has to do with dreams and optical illusions.

But maybe we should save that discussion for some other time . . .

✂ ✂ ✂

"The fool says in his heart there is no God"—Psalms 14:1

"Man has made God in *his* own image!"—old saying.

PART TWO
TWO WORLDS

TWO WORLDS

There are two Worlds—the Real World and the Nightmare World.

You reading these words live in the Nightmare World.

In the Real World logic exists.

In the Nightmare World it does not.

In the Real World life does not destroy life to exist.

In the Nightmare World there is the “food chain” and “Nature’s cycle”.

In the Real World the living creatures do not ever hurt each other. In fact, they help one another.

In the Nightmare World it is “everyone for himself” and sadism—the joy of hurting your fellow creatures just for the fun of it.

In the Real World there is Truth, Nobility, Honor, Integrity, Honesty, Kindness, Justice, Beauty and Peace.

In the Nightmare World there are not those things—but the opposites of those Concepts—plus: crime, disease, pollution, greed, envy, hate, and “money”.

Only in the Real World does Pure Love exist—not the shabby parody of “selfish” love which the Nightmare World has.

In Mark Twain’s story *THE MYSTERIOUS STRANGER*, Satan, in the form of a human boy, comes to Earth in a small town in Austria and gets involved in some local situations. The last two pages of the story are a long statement by Satan to the narrator. It concludes

with these words:

"Life itself is only a vision, a dream. . . . Nothing exists . . . (not) God, man, This World, the stars . . . all a dream. . . . Nothing exists except empty space and you—and you are not you—you are but a thought—a vagrant thought, a homeless thought—wandering forlorn among the empty eternities."

Then Satan fades away.

Following are proofs that it is the Nightmare World you are living on right now:

Proof 1. DREAM MARKS: Did you ever have what you would call a "nightmare experience"? A common example would be: changing a flat tire in the rain on a lonely road. Other examples: getting lost anywhere (in the woods, in a strange town). Were you ever lost when you were a child—separated from your parent—in a large department store? Surely being arrested for the first time is a "nightmare experience". Being mugged? Or raped? I think we can safely presume you have had one or two very bad experiences (probably many) that you could honestly call "nightmare".

When you are asleep and you dream a so-called "nightmare"—you know how bad that can be. Your heart pounds. You sweat. Haven't you noticed that "real life" nightmares cause the exact same bodily reactions? Can you now accept that SOMETIMES life does seem like a dream—or nightmare? We are well aware, of course, that sometimes life may seem like a Good Dream. Don't we say: "My new (car, boat, lover, etc.) is a real dream"? This is the basis of our idea: to get you to admit that sometimes life seems like a dream. Now, we only have to go one step further. The life you are now living is all dream, all nightmare. You are living on the Nightmare World—not the Real World.

At one point in Satan's speech in *THE MYSTERIOUS STRANGER* he says: "Strange! that you should not have suspected (that life is a dream) centuries, ages, eons ago! . . . the DREAM MARKS are all present; you should have recognized them earlier!"

Proof 2: INVISIBLE BUT SOLID OBJECTS: Of course you know what glass is. As it turns out, the existence of glass, clear plastic and cellophane are totally illogical. As stated before, only the Real World contains logic. The presence of "glass" in this world proves this is the Nightmare World. Glass is made from sand, which is rock, which is metal—silicone, potash, lime and other *metals*. So glass is made of ground-up rock or metal. It is melted (metals melt), swirled around in a pot, spread out, and "magically" (another term for illogic) we have a solid but invisible substance called Glass. But, why should glass be invisible? Or transparent, to be technical). No known metal on Earth is invisible—why should "glass" (a mixture of metals) suddenly become invisible? We know *how* to make glass; we don't know *why* it's invisible. Sand is not invisible. But glass made from sand is. A hard solid object that is invisible: when you think of it like that it is very odd—weird—strange—almost dream-like, wouldn't you say? Glass sounds like something from a science fiction story or a fairy tale. The answer is that glass can only exist on an illogical Nightmare World. There can be no glass on a Real World. (Window pane glass, when looked at from its edge, is not transparent; it is dark green!)

Proof 3: THE HUMAN MUSCLE SYSTEM: The average man's arm weighs about 10 pounds. If this were the Real World (where logic exists) it would be impossible for a man to lift a weight greater than the weight of his arm. Logic states the greater must dominate the lesser—not

the reverse. If a small stone is thrown against a large boulder, it is the small stone that rebounds away from the larger. But the fact is, that on *this* World a man can lift ten, twenty or more pounds with his arm—even allowing for extra “leverage” with the rest of his body. It should be impossible for a man to lift a weight greater than the weight of his arm. The study of biology and anatomy cannot tell *why* human muscles (which are just flesh or meat) function. It is illogical. And illogical situations can exist only on the Nightmare World. (No one should be able to pick up more than their body weight.)

Proof 4: THE TELEPHONE: We are taught that when one speaks into the mouthpiece of a “telephone” bits of carbon jiggle about. Somehow, these bits seem to form an electrical impulse which is sent along a wire—even for thousands of miles. Somewhere at the other end, a person is holding another “telephone”; this time he is using the “receiver” which also contains “carbon bits”. The electric seems to jiggle the carbon bits in the receiver and out pops the other person’s voice—exactly their voice—you can even recognize it. We must not forget to mention that thousands (millions?) of “Calls” can be carried along in the same wire at the exact same time. You will never be disturbed by an unexpected “call” or a ringing “telephone” on the Real World. Telephones can only exist on the Nightmare World.

Proof 5: RADIO: This is an item even more nightmarish than the telephone. With radio we have something called “airwaves”—billions of them. They are shooting all over the place, in all directions, through all sorts of dense materials, through buildings, mountains, cities, and constantly through every inch of our bodies. They cover the

entire planet, in fact. They can travel thousands of miles. Yet, you can capture one anytime you want by turning on the switch on your little plastic and tin “receiver”. What is a “radio wave”? Why don’t they get mixed up? Yes, they do sometimes. But there are millions of them, remember. Just because you sometimes hear two “channels” at the same time is hardly being mixed up. The telephone at least works on a one-to-one basis. Correction: it did. Now there are “conference calls”. But basically the telephone is one transmitter, one receiver. But radio consists of *one* transmitter (at the studio), *one* microphone sending out *one* airwave—but yet that one wave—magically—can be picked up by a billion receivers in all directions—all at the exact same instant. How is this possible? How can one wave reproduce itself a billion times in all directions? We can pick up the exact same wave on two sets or two billion—all with the same strength and pitch. As you might expect, only the Nightmare World has radio.

Proof 6: TELEVISION: What can we say? Whatever we said about radio goes double for television. How a “picture” breaks itself up into electrons, forms back into a picture again and reproduces itself billions of times while doing it, is quite a common occurrence—here on the Nightmare World.

Proof 7: TV-RADIOS: These are fairly new. They are like radios but can also “pick up” the audio portion of any television station. It calmly ignores the picture of a TV show and just carries the “voice”. These are very nice. I bought one. I used money to buy it. Money, as you will recall, is accepted only on the Nightmare World.

Proof 8: CAMERAS: It seems that I can just hold this little box up, press this button, and pull out this little

piece of paper. Upon carefully studying the paper I see it contains a very clear image of you—the person who happened to be standing in front of my little box when I pressed the button. What happened, I suppose, was that a light reflected image was imprinted on special chemically treated fibrous film of some sort. We must not forget to mention movie film. Here you see a whole row of slightly different “pictures” of a moving object. This film, incidentally, is made of celluloid and is solid but invisible, except where the “pictures” are in it. Of course, then there is video tape which is supposed to be just like movie film, but doesn’t have the little pictures in nice square boxes all along it. Video tape is dark brown or gray. No pictures at all on it—except when you run it through a video projector. Then it suddenly has moving pictures—just like movie film. There are no movie theaters or television studios on the Real World.

Proof 9: RECORDS: These are solid plastic flat wheels. On the Nightmare World voices and music are somehow “stuck” into these plastic wheels—and if you scratch these wheels, the voices and music pop right out at you. Interesting invention. Unlike a radio or TV, records have no wires or electrical components within them. You can break a record right in half. It is solid plastic through and through.

Proof 10: AIRCRAFT: Feathers float in the air. Leaves fly around in the wind. Paper kites fly in the wind. Maybe even you in a glider can fly or float in a very big wind. Big airplanes don’t fly on the Real World. 747’s don’t fly. Jumbo Jets and Piper Cubs don’t fly (on the Real World). Big heavy things can’t fly on this Real World. Only in our nightmares everybody and everything can fly anytime it wants to. Only on a Nightmare World.

Proof 11: BOATS: On both Worlds small pieces of wood float. On both Worlds canoes and rowboats float. But on the Real World oceanliners do not float. They are too heavy. Dreamboats do float, however.

Proof 12: OCCULT: Thousands of people disappear every year. We don’t mean people who go for walks and don’t come back. We mean—when you are talking to Aunt Tillie and you look away for one second, look back—and she’s gone. You know she didn’t have time to run to the door (if she could run or move at all). She is just gone. There are thousands of cases just like this every year. There are also Appearing people—ghosts, sort of. They just appear all over the place. This includes “bedroom phantoms” but also regular people too. You know bedroom phantoms exist. You have seen them. That’s right. That slight little movement in the corner of your room, just as you’re falling asleep—or sometimes as you’re turning over and wake partially up. Of course you tried to convince yourself you didn’t see anything. Let me tell you now: You did see it. They are not “tricks of the eye”. They are very real. They are always with us. The more you look for them, the more they will let you see them. They are a bit playful, this way. They love to stand very close to you—even in broad daylight. They breathe very softly on the back of your neck. Sometimes their breath is cool, sometimes warm. Now you know you have felt their breath at times. It is silly for you to continue to deny this. Government scientists are very well aware of them. Almost any simple device can pick up their electrical impulses. All radar installations have to be adjusted so as to allow for their electrical presence. When you are asleep on your back they will lean over very close to your face. As fast as you open your eyes all you will see will be the slightest flash

of them as they disappear. Why shouldn't there be these nightmare creatures on this nightmare world? I defy you to look up right now from this reading and stare hard across the room. Go ahead. Do it. Now!

× × ×

You saw it, didn't you? I know you saw it and you know it.

My intention is not to frighten you. I am simply still trying to convince you that this world you are living in is not rational, logical, or simple. This is truly a dream-like world and all occult occurrences can only occur on a dreamy dimension. The Real World does exist, though. Very similar to this one, but with the differences we are listing here. There is fun, work, excitement and even sometimes boredom on the Real World too. Why we are on this World and how we can get to the Real World (if we so choose) will be gone into later on.

One final word about bedroom phantoms. We know they are playful. ("Hide and Seek" is their favorite game.) You may wonder if they can also be harmful. I wish I could tell you they are harmless. They are not. Each night countless people are strangled in their beds—mostly people living alone, but not always. In most cases the bedroom door is always locked from within. You've read of "locked room" mystery stories. Unfortunately, the locked room murder is quite common in life too. The Bedroom Phantom can strangle you, attack you, or simply just appear fully and completely before you. They are not human-looking at all. You will scream and may instantly die of fright—as millions do every single night in their sleep. Too bad if it happens to you.

Besides bedroom phantoms, apparently normal regular people can suddenly appear instantly from out of nowhere. You may be in a store—the only customer—you turn around and bump into somebody. You *know* this person was not there just one second ago. "They just came out of nowhere" you say to yourself. You are right. As in all dreams, people can vanish or appear instantly and for no apparent reason at all. Objects vanish too. Did you ever put a pencil on a desk and one second later it's gone? You know it did not roll off, but you look all over the floor for it anyway. It is just gone. We "lose" bigger objects too all the time. Big objects appear too. Many highway accidents are caused by another car that "just appeared out of nowhere" and you sideswipe another car to avoid hitting the one that just appeared. Then the other car mysteriously vanishes again. Or it may not vanish. It may just be a regular person you have the accident with—but both you and they would swear that "other" car was not there seconds before.

Proof 13: STEREOTYPES AND ARCHETYPES: A farmer has a red weather-beaten face, wears a straw hat, red shirt and blue overalls. An office worker wears a business suit and carries a briefcase. A teenage punk wears a black leather jacket (or did at one time—stereotypes change). "Hillbillies" are dumb. Jews are cheap. Scotchmen are frugal and drunks, etc. etc. All nationalities have certain archetype characteristics. On the Real World this is natural and logical. There should be these certain "types". Why not? People with the exact same background should look and act very similar. The starving masses of India certainly all seem to look and live the same. But in this Nightmare World there are no stereotypes. There are millionaires who live in poverty-class shacks (The Collyear Brothers, Hetty Green); there

are “hillbillies” who are mathematical or business geniuses; farmers who own and use complex computer systems to run their farms; etc. No matter how we first classify a person—as soon as we get to know them as a personality—they are far different from their stereotype. Stereotypes should exist, but they do not. They exist only on the Real World. They do not exist here on the Nightmare World.

Proof 14: ZENO’S PARADOXES: You may have learned about these in school. Look them up in an encyclopedia or ask someone who knows. The fact that countless mathematical and logical paradoxes exist, prove this is not the Real World. Where was the man when he jumped off the bridge? Not on the bridge. (That was before he jumped.) Not in the air. (That was after he jumped.) Which is the dancer and which is the dance? Is not every exit an entrance to somewhere else? Is a bell a bell if it has never been rung? Are there colors in the dark? These are only a few of the simple ones.

Proof 15: PI: Pi is the mathematical formula for describing the circumference (distance around) a circle as related to its diameter (distance across). Example: a square with a one inch diameter. Its distance around (in this case it’s called “perimeter”) is equal to 4 inches. We could say the pi of a square is 1 to 4. (one inch across, 4 inches around.) The square is a perfect shape. But so is the circle. Suddenly everything becomes illogical—dream-like. The pi of a circle is 1 to 3.14 (etc.). What happened? Why isn’t it 1 to 4 anymore? If the distance across our circle is one inch, its distance around should be 4 inches. But it is not. It is 3.14 inches. A very odd figure, that fraction. On the Real World pi is equal to 4. On the Nightmare World, 3.14.

Proof 16: LOVE: What is it exactly that you love about your loved one? Do you love your loved one’s body and mind? Of course you do. Do you love your “sweetheart’s” eyes and hair? Of course you do. Do you love your loved one’s intestines and liver? If you do, fine. If you do not, why not? It is an important part of them, is it not? Do you love their lungs, stomach and kidneys? Do you love the feces in the their bowels? Oh, are you choosy? Do you only love some parts of them and not others? But how can that be? Are they not made up of the sum of their parts? I really would like to go much further with this disgusting paragraph, but I suppose you get the idea. It turns out that “love” on this Nightmare World is not exactly what it seems, wouldn’t you say?

Proof 17: MAGNETS: Mysterious, are they not? Needless to say, all invisible “forces” such as magnetism and electricity do not exist on the Real World.

Proof 18: SUPPLY AND DEMAND: Every year production and sale of cars doubles—yet no obvious increase of cars is seen on the roads. (There are heavy traffic areas but actually every square inch of our PLANET should be flooded with cars—even allowing for all those destroyed every year.) Thousands of pounds of diamonds, silver and gold are mined each year—yet no obvious overflow of the stuff is seen at your local store. The Law of Supply and Demand, which is logical and exists on the Real World, does not work here on the Nightmare World. If more and more precious metals are being mined each year, the market values should be falling. Of course you know, the rates on most of these metals rises every year. The world population also seems to nearly double every year—but where are all these people? Each day millions of people look for

their first job, second job or new job. Most people look for these jobs in their local areas—yet most seem to find them. (If it wasn't so easy to get on welfare, the unemployment would drastically drop.) Certainly there are many times more people working than those unemployed. How is this possible? The old science fiction plot says that alien spaceships take all the excess of things and people, while rearranging the memories of the people remaining so that we always believe such things always were. (A woman and all who know her are made to "forget" she had four children instead of one.)

Proof 19: HUMOR: Humor destroys the false "reality" of the Nightmare World. It is very difficult to take an idea, story, or person seriously once you have seen a parody of it. A serious movie or novel about a modern big city hospital may be a very grim, though inspiring experience. But a wild slapstick comedy movie about a big city hospital may prevent you from ever thinking of that subject seriously again. The humor has destroyed the reality of it. True horror stories about ghouls or vampires, told in the right atmosphere, may be frightening. TV cartoons of clumsy, funny "monsters" makes us not afraid. Humor, in the form of parody and satire, cannot exist on the Real World.

Proof 20: LANGUAGE: On this Nightmare World, as soon as we closely examine the definition of a word, it loses its meaning. Is a paper bell a bell? A bell is something that rings. A Paper bell cannot ring. But it looks like a bell. Is a drinking glass still a "glass" if it is made of paper? Is a paper cup a "glass"? If I drink water out of my hat, has my hat become a "glass" or container? If I put a cooking pot on my head, is the pot now a "hat"? If I sit on my desk, is my desk now a "chair"? Is a person

an "author" if they have not yet had their book published? If a comedian is not funny is he still a comedian? Some words have no definitions at all. What is "life"? What is "human", "animal", "male" and "female"? Is a non-thinking (retarded) human an animal? Is a well-trained chimp who wears clothes, etc., a human? Is a sterile female not "female"? Languages themselves are supposed to have evolved from simple grunts and sounds. Yet each language on Earth is so complicated, has so many strict "rules" of grammar and construction, that they could hardly be seen as a series of "evolved grunts and sounds." Languages are obviously artificial. Yet how can they be? Who created them? More contradictions on this Nightmare World. And if Americans speak "English", why don't they have "English accents"?

Proof 21: CARTOONS: A good artist can make the simplest caricature of a famous person and we instantly recognize them. Why? How can a simple line equal a whole human face? This real-life symbolism is pure dream-stuff.

Proof 22: DIGNITY: Few would deny this Nightmare World that we are living in is savage. Crime and violence is everywhere. Yet, amid all this violence of the common masses, there exists dignified and elegant people. How and why?

Proof 23: ASTRONOMY: If outer space is truly a vacuum, why do not all the planets, stars and other so-called "solid" bodies simply disperse their atoms and explode and vanish into nothingness? If the stars are really "suns" and are different distances away from us—and some are billions of times larger than others—why do they all look exactly the same size and shape and appear to be equally distant

from each other? Why do we have to look *UP* to see the sun, moon and stars? Is Earth the low-man on the totem pole? As is well known, the so-called "moon landing" of July '69 (here on the Nightmare World) was an obvious hoax. Of course, radio and television waves can never pass through the vacuum of outer space—not to mention men and ships which would instantly disintergrate as soon as they enter the vacuum of space. (Even here on the Nightmare World there are some strict rules of Science which must be obeyed.) But even if we didn't know that nothing can exist in the vacuum of space—we still must laugh at the photos allegedly taken by the astronauts while "on" the moon. As you recall, in those films, the blue floating earth is clearly seen above the lunar surface. Now we can't have it both ways—can we? If we on Earth see the moon high above us—anyone on the moon would not see the Earth *above* them. They would have to look *down*.

Here on the Nightmare World, even hoaxes must be carefully thought out ahead of time. One of the most widely believed ideas here on the Nightmare World is that the Earth is 24,000 miles in circumference and that it takes 24 hours to make a full turn. If this were true, that would mean that it is "spinning" 1,000 miles per hour—(that's dividing 24 hours into the 24,000 miles) First of all, if it were spinning that fast (west to east) there would be very powerful winds all the time as we rushed through the air. (1,000 miles per hour winds). Since we know that there is no constant 1,000 mile per hour wind (we have winds from all directions at all different speeds, tho none that fast) we have our first clue that all isn't as we were taught. Our second clue is that if it were spinning 1,000 miles per hour (west to east), then all you would have to do is get in a helicopter and hover

over New York and in less than one hour, Chicago would pass right under you. And in three hours California would be right under you. And all you would have to do was just hover, without moving. Amazing, isn't it? If you are on a fast moving merry-go-round, and you jump up without holding onto anything, you will not come down in the same place you jumped from. In fact, you will probably receive a serious injury from a wooden horse who was some feet behind you before you jumped. The same is true if the Earth were spinning—1,000 miles per hour. That's 500 miles in a half hour. 250 miles in 15 minutes. 125 miles in 7 1/2 minutes. 62 1/2 miles in 3 3/4 minutes. 31 1/4 miles in 1 7/8 minutes. 15 5/8 miles in 54 seconds. 7 5/9 miles in 27 seconds. 3 1/2 miles in approximately 13 1/2 seconds. And so on. (Figuring out all this math is truly nightmarish) (If you ever jump off a high bridge which will take you 13 1/2 seconds to hit the water, and if there is a non-moving boat 3 1/2 miles away from you in your direct path, be careful.)

And, if there was a lagoon a mile wide between two high mountains and you dive off one cliff to land in the lagoon—and it takes about 10 seconds to hit the water—you will probably dive right into the second cliff across the water which has now moved right under you—if the world were spinning, which it is not.

Now that you know that even this Nightmare World is not spinning, we must discuss another false belief: that this planet is a "globe" or "ball" and "gravity" keeps us stuck on it so we don't fall off. Obviously, our own sense of balance tells us when our bodies are on the slightest incline. You know it and feel it. People simply cannot "stick" to the sides and bottom of a ball like a fly. The old joke about digging straight down from America to China would then be true. It isn't. Do you really believe that if

the Chinese dig straight down they will come up in America and find us all upside down? That would have to be, if the world was "round". And what about Australia? Are the people there walking upside down on the bottom of the world? (And only the people in the far north can walk upright?) "Gravity", to hold us down would have to be so strong we could not lift our feet to walk. This world is like a pie: the "north pole" is the center; the "south pole" is the crust around the entire edge. The continents are laid out flat around the arctic. From anywhere one can go due north and "miss" or bypass the "north pole". But no one can go south from any direction without meeting the "south pole" crust or barrier. What lies beyond this "crust" is not common knowledge. Airplanes do not allow for a six foot dip every three miles, which they must if the world were round. Planes fly up and then straight. Like the deep sea fish that cannot be brought up to the surface without exploding, and like Mount Everest which could only be climbed after the invention of the oxygen mask, humans must remain within certain narrow levels. The depths of the Earth and outer space will forever be "off limits" for us.

Proof 24: BIOLOGY: On this Nightmare World, if we bend over blood rushes to our head. Why isn't it rushing to our feet when we stand up?

Proof 25: EXISTENCE: On the Nightmare World some-things can exist and not exist at the same time. This could never happen on the Real World. A far-sighted person can see a sailboat far out at sea. A near-sighted person cannot. A drunk or drug addict sees insects or monsters crawling on a wall. Those not under the influence do not see them. Does this mean the monsters are not there? Was the sailboat not there? Colors simply do not exist for

blind persons. They do exist for the sighted. Sound does not exist for the deaf. It does for the hearing. And what is "Time"? Does it really exist? How does The Past instantly become the Future—what is the "present"?

Proof 26: THE BIG MYSTERY: On the Nightmare World, life itself is a mystery. Why are we here? How did we get here? What is the purpose of it all? Philosophy and religion offer many answers—but deep down we all know those answers just are not right. "God" is not the answer because we naturally ask: Who made God? An Evolution Accident is not the answer. "It always was" is not the answer. We live in a mystery. We did not ask to be born. We are all trespassers here on the Nightmare World.

Proof 27: PREDESTINATION: Predestination exists only here on the Nightmare World. Obviously, inventions are predestined. + 1930's cars are logical improvements over + 1920's cars. '40's cars are the logical improvement over the '30's cars, etc. Why are athletic records constantly being broken? Why wasn't the 4-minute mile run in the + 1920's? Any speed record can be broken by 1/10 of a second. All records are always being broken each year. Can this continue unlimited? Will there ever be a 1 minute mile? There is a pattern, predestined, for all things here on the Nightmare World. As Charles Fort wrote, thousands of intelligent observers had watched the lid on a pot of boiling water jiggle around centuries before James Watt did in the + 1700's. Apparently it simply was not yet "steam engine" time. The Predestined Plan decreed this "discovery" to be made when it was and no sooner. All "discoveries" and "inventions" must await their proper time to be let out into the world—as DaVinci's designs prove.

CONCLUSION: THE NIGHTMARE WORLD'S SECRET EXPOSED:

Here on the Nightmare World, at night when you sleep you dream. You sometimes dream about people you know. But you also, sometimes, “dream up” people you do not know. Supposing you dream you are walking down a street? There are other people you are passing—people not really important to this particular dream—but they are there; they exist in this particular dream. You may dream you are in a crowded city or store. As stated, you also dreamed up those “extra” people in the background of the city or store. Since we assume these “extra” people are wearing clothes, that means you also dreamed up their clothes—and the stores where they bought those clothes they are wearing. In other words, you dreamed up or created “perfect people”—even if you yourself don’t know anything about them—other than that they exist. Now, these people (who you dreamed up but are not important to any particular dream) have full lives. They have parents and some have children. You are not aware you are dreaming about the parents of a “background character” in your dream—yet you created and dreamed those “parents” up, just the same.

Now, when all the characters in your dreams go to sleep at night, *they* dream too. They dream up “background characters” to their dreams—just like you dreamed them up. And so on.

So, life here on the Nightmare World, is a dream in a dream in a dream and so on back.

It also goes the other way. We, you and I, are characters in someone’s dream. But *this* Dreamer, who dreamed us up, just happens to be a character in someone else’s dream, who is a character in a dream, etc. Did you ever

stand between two mirrors and see an infinite number of yourself looking into a mirror? That is the idea of this dream within a dream thing.

THE ANSWER YOU’VE BEEN WAITING FOR

Alright, so you want to go to the Real World and leave this Nightmare World behind. Simple. As you know, some dreams do come true. First, you must stop dreaming. Break the “chain”. Jam that pattern. Block that tackle! Hold that line!

Actually, I’ve already given you the answer back in Proof 19: Humor. Your sense of humor will destroy the horror of this Nightmare World. Always keep your sense of humor and try to improve it. The Nightmare World tries hard to be very serious. If you don’t take it seriously, its power weakens.

Besides, it’s all going to blow up soon anyway.
So what are you worried about?

ADDENDUM 1

More about the “Moon Landing”: On that July morning in +1969 when all the TV news shows were giving full coverage to the “Moon Landing”, the NBC *Today* Show had newsman Dave Garroway interviewing various people.

At one point, Garroway turned to the TV audience and said: “Isn’t it amazing—that of all the countless Science Fiction stories that were ever written—and the countless movies and TV shows—all about the first Moon Landing—not *one* of those writers predicted that it would all be seen *live* on TV by millions of people! Amazing!”

No, not amazing, because each and every one of those Science Fiction writers were taught in the Fifth Grade (or so) that it was impossible for TV or radio waves to travel through the vacuum of outer space, as these TV and radio waves are air waves and must travel through a "medium"—either air, liquid, or a solid. That is why no one made that "prediction". Even though they were writing Science Fiction, the writers knew at least this one indisputable fact—no radio or TV from outer space to Earth (or vice-versa)!

If you recall, you too were taught about the vacuum of space. So, what we have stated in Proof #23 holds true: All space flights are faked. Why? Jobs! Jobs! Jobs!

On the second day of the "Great Moon Landing" NBC newsman Ed Newman was commentating with a NASA representative on the supposed live TV pictures we were at that moment getting from the Moon, all over the world.

The camera slowly panned across the luna landscape while Ed and the NASA man calmly pointed out the various craters and landmarks.

Suddenly, the camera made a slight dip, and what each of we millions of viewers saw was that the "landscape" was a *drawing*! The camera must have accidentally lowered too much and the folded and curled bottom edge of this "landscape" *painting* was seen tacked to a large board. There was some upside down handwriting on this lower edge:

Ed Newman and the NASA man were silent, having broken off their discussion in mid-sentence. Actually, the camera went down *twice*. The first time was an apparent

accident. The cameraman immediately raised it back up to the "landscape" picture. But then, this cameraman must have wondered what he saw—and he lowered the camera again and there was the tacked and rolled edge of the drawing with the handwritten notation! He quickly raised the camera again and began to pan slowly back and forth. At that point, Ed Newman actually asked the NASA man (in a very embarrassed voice): "Er . . . what was that writing we just saw?" The NASA man was silent for a moment, then said: "Oh, that was just a notation on the ship's dashboard." Again, both men were silent for several moments—and then began their same dull commentating.

Millions of us viewers saw and heard this incident—but as psychology proves: when we are not looking for errors, we do not see them!

(I wrote to *TV Guide* and several newspapers on that same day all about this incident with Ed Newman and the drawing that was supposed to be "live" pictures from the Moon. Needless to say, none of my letters were ever printed or responded to.)

In *SAGA Magazine* for March and April + 1974 there is an article about all the remarks that the actor/astronauts allegedly let "slip" while on the moon. It seems they were just finding evidence all over the place of UFO's and intelligent alien life! Several TV documentaries have since mentioned the two or three UFO's the actor/astronauts allegedly saw while flying to and from the moon. They even used the code word "Barbara" meaning: UFO PROOF! But contrary to popular belief and these two *SAGA* articles, the Air Force is *not* suppressing UFO information. In fact, the Air Force first created the entire UFO situation and continues to embellish it all it can, especially with these so called inadvertent remarks from the actor/astronauts.

Their reasoning is: that if UFO's & Aliens exist, we certainly should have an all-out Space Program to go out and contact "Them".

It's the old trick: by denying alien life so strongly *in public*—but letting it "slip" out that they really believe and have many proofs of "Them"—the general public will support and favor a large Space Program. Why? Jobs! Jobs! Jobs!

More about the Myth of Gravity: Our skin is very stretchable. If there were "gravity" our skin would eventually "droop" until it was all around our ankles! Certain shapely women obviously "defy" gravity all the time—as do ceiling-walking insects and mountain goats.

ADDENDUM 2

THE "DARK" AGES OR THE "SNARK" AGES?

Lewis Carroll's poem *THE HUNTING OF THE SNARK* shows "life is a dream". The Snark is the Dreamer. During a quest for it, the only member of the crew who finally gets to see it at the end, immediately vanishes out of existence.

This book has already presented many proofs that life is a dream. But there may have been a clue to this for everyone who took a 6th Grade History Class in school.

If you recall, your teacher sort of skipped over "The Dark Ages", right? They said: "10,000 years ago there were three Civilizations—the Egyptians, the Greeks, and the Romans. The Roman Empire fell in the year +500. Then came The Dark Ages for 500 years and then came the Renaissance, and then 'modern times'."

Whoa! Hold on there a minute. Exactly what were "The Dark Ages"? Well, said they, for 500 years there was no Science, no machines, no Nations, no *languages*. People just huddled in caves for 500 years. Suddenly there are all separate countries—France, Germany, Italy, etc.—each with a refined culture—art, science, music. There are Castles and Kings and Queens. And Poetry and Writing. And Ladies in lace and Cavaliers in white silk stockings and. . . .

Whoa! (again). What happened? 500 years of cave people and then "suddenly" (in one day? one year? one decade?)—all of a sudden, it is Modern Times? How can that be? Suddenly it is the Renaissance!

Humph!

The furthest any "Royal" family can trace themselves back is to the Year +1000 (approximately). Queen Elizabeth knows every one of her ancestors—up to the first King of England (Ethelred, or whoever) in that Year +1000—but no one knows *his* ancestors.

We know all those first Kings in that year—the Italian King, French King, German King, etc., but not their ancestors. (And we really don't know much of anything about old Charlemagne.)

And what about languages? Suddenly, there are all separate and distinct languages. But no modern language of today can be traced back further than the Year +1000. If there ever was a real Tower of Babel, it happened in +1000, not -5000. (Instead of the lion food they should be, the Church now becomes all-powerful in this Year of +1000.)

Of course, there is only one logical answer to all this. The Dreamer dreamed up Egypt—but then let most of it decay—then dreamed up Greece, and let it wither—then dreamed up Rome up to +500. But then "The Dark Ages". No Dream for 500 years. Suddenly, a brand new dream

in +1000—complete with its own new Science, Math, Poetry, and different Nations, each with their own distinct language and culture. (There was actually an earlier “Dark Ages” also of 500 years between the last Egyptian Dynasty and the Homeric Age of Greece . . . – 1200 to – 700.)

A new dream.

And now—maybe this year—it is time for the next new Dream.

Don't miss it!

Be there!

✕ ✕ ✕

I hate to admit this, but it looks like the Secret Rulers of the World know something that we do not.

Fact #1: The Big Powers of the Earth are not enemies. The U.S. does Big Business with Russia every day (sale of computers, etc.). That is a simple lie about them being enemies. They aren't.

Fact #2: As has been pointed out many times, by anti-nuke people, if only three or four Atom Bombs are needed to destroy all of Russia or the U.S.—why is each country making and stockpiling *thousands* of them? Why “over-kill”? Certainly both countries know that thousands of missiles are not needed—so why are they being manufactured at such an increased rate?

The only logical answer to that is that the Three Big Powers are expecting a War—but not with each other—with other “outside” Powers.

Who can this “other” Power be—that thousands of missiles will be needed?

Atlantis? Mars? The Hollow Earth World?

Well, it is Somebody. And who the “Somebody” is—is a Big Secret.

What if—the U.S. and Russia were warned (50 or more years ago) about an impending Invasion from (let's say) “Mars”—say to take place about the Year +2000? Then suddenly the actions of the past 20 Presidents all make sense. No wonder we (and “They”) have been stockpiling Super Weapons.

Maybe—somewhere—it is a known fact that the “Ancient Astronauts”—or JC and his gang of Angels—or the “Martians”—are due to arrive for the long-prophecized Battle of Armageddon—and that is what all the furious missile-building is all about.

Russia and the U.S. won't be pointing those thousands of Warheads at each other—but up—at that “other” invading Power.

Now that is the only theory that makes sense, right?

You know, of course, about the “Washington Letter”—that each new President is shown on his first day deep in the bowels of the White House? An actual letter from George himself that states: (in effect): “You, the new President, are a figure-head only. The World is ruled by the Secret Nine. You must maintain the fiction that the large Powers are enemies. You must prepare for the day when the——s (or the)——s will invade us!”

You know those “Founding Fathers”—Washington, Adams, Jefferson, Franklin, etc.—were all Masons and into all sorts of Mysticism. Why do you think that Eye and Pyramid are on the Dollar Bill?

Maybe they knew—even then—that Armageddon is a-coming.

No wonder the Government is always cutting the poor folks' Welfare and Food Stamps to build more missiles.

No wonder.

Armageddon—and then—the Next Dream!

⌘ ⌘ ⌘

“I have seen some corners of the White House today that I didn’t know existed in the eight years I lived there!”

—President-Elect Richard Nixon
November 11, +1968

NEW NOTES

1. Clue to ending the “dream”: only rarely we can actually put our own ending to one of our regular dreams. This can only be done in the last few seconds of sleep—as we are waking up. If we do a very drastic action in our dream, the dream will end the way we want, but we will then wake up. No doubt the Solipsist Dream will work the same way. Reward: the final “waking up”—but into what?

2. Waterfalls: How can they “fall” forever?

3. Happiness comes once one realizes it is all a dream—it becomes a child’s game—you can pretend or play at whatever you want to be—and be happy.

4. The “Law” of “Gravity” does not apply to hydrogen or helium—why? Are they “excused” from that “law”?

5. So the Earth is “round”—but round like a pie—not round like a ball. Columbus went around the pie, as any-

one else can do. The “equator” still exists as the center circle line in the middle of the “pie”.

6. The calendar disproves a “perfect” God’s existence—365 1/4 days? (an allegedly perfect circle would be 360 degrees, of course)

7. There can be logic to apparent illogicalness. If I asked you to draw a design and not let it be a circle, square, triangle, or any other known figure, your finished product would look like random scribbling to a third party. But of course, you and I know that since you carefully avoided using known shapes, the design *is* logical—not random and illogical.

8. Hard work paradox #1: If it was not a dream, people who work hard and help others would be happy and prosperous. Mostly the opposite case is true in this life, is it not?

9. You may be familiar with the child’s puzzle “What’s Wrong With This Picture?” But “life” is exactly the same. There are too many things “wrong”—disease, corruption, crime, unhappiness, etc.

10. Hard work paradox #2: “Reward”: Should hard work result in a “reward”? The miner who struggles 50 years in the desert finally finds gold. The arctic explorer who walks through frozen horror for months finally reaches a tropical paradise—complete with Super Civilization. (See Richard Byrd’s diary). Is there a “touchstone” reward? Somewhere—accessible, but not easy to find—but once it is touched, there is magic. Is this “Touchstone” the “fail-safe” device on The Dream? Has the Dreamer

only to find it, touch it, and the Dream ends? If so, there must be clues to it. Are DANGER, LOGIC, and FREE FLIGHT the clues?

11. Reading History and Archaeology can be just as interesting as reading fiction (which it is)!

12. TV News Paradox: There are TV News Specials about how TV News Specials aggravate and encourage “copy-cat” crimes (Halloween poisoned or glass-filled candy, drunks doused with gasoline and set on fire, etc.).

13. Word Paradox: Here are two statements: (1) “Eskimos have legends about the Hollow Earth”. (2) “Some people say Eskimos have legends about the Hollow Earth”. Obviously, Statement #2 is correct, even if Statement #1 is not correct.

14. Definition of “Paradox”: an incorrect fact. (!)

15. Death of celebrities Paradox: Why are so many so-called “celebrities” “Un-Dreamed” out of existence just at their peaks—Franklin Roosevelt, Ian Fleming, Bruce Lee, Max Brand, etc.? Obviously, the confusion caused by these “untimely deaths” is more mischievous humor on the part of the Dreamer. Another example would be Emmeline Pankhurst, the famous English suffragist. She devoted her whole life (and her 2 daughters’ lives) to the woman’s movement—but then died *one month* before women gained full voting equality in + 1928. Cruel irony on the part of the “Dreamer”?

16. Unrepairable Items Paradox: Some machines and appliances simply cannot be repaired. They just will not

work—even though all experts can see nothing wrong. More humor on the part of the Dreamer. (Cars, TV, etc.)

17. Fun in the post-Dream state: Recreate all your enemies from the last Dream, and torture them.

18. If all “stars” are really “suns”, why is Outer Space dark? How can there be dark space *between* any two great blazing “suns”?

19. “Incompleteness” is another “Dream Mark” (Proof #1)—mutants, monsters, freaks, hermaphrodites—all Nature’s “mistakes”—are the so-called “insane” or “retarded” simply incomplete dream-people?

20. Life Paradox: Life is simply too unoriginal—too many clichés—The World is *always* on the brink of war, or at war—crime for no reason (just “kicks”), sadism in all people—“power-mad” Monarchs—or almost anyone who achieves fame, etc.

21. Witchcraft/Occult Paradox: All we dream-creatures are always wishing we could change the Dream (our life). We all have inherent knowledge that the Dream *can* be changed—radically and instantly changed—(winning a lottery, etc.). That is why “Magic” is studied and practiced. Real occult magic would, of course, change our personal “Dream” (for the better) instantly.

22. Two Worlds Credit Cards: On line in a department store a person’s credit card is examined, placed in a stamping machine, and copied carefully. On TV ads where a free phone call number is given, they just ask for the number of your card right over the phone. What happened to the big stamping machine and all the careful checking?

23. Proof #1 was about nightmare experiences. But even *little* troubles expose the Dream Fabric.

24. Pro-Wrestling Paradox: It is real, fake and exhibition—all at the same time. Wrestlers fight for real, the referees control who wins, the flashy moves is the exhibition.

25. Fame Paradox: TV “soap opera” stars are known to millions of people—yet, are completely unknown to millions of other TV watchers. So, are they “famous” or not? What does “famous” mean?

26. “1 out of 2” odds Paradox: *All* odds are one out of two. Either you win a lottery, or do not (even though you are one of one million ticket holders). The odds of throwing any one number of a die is not 1 out of 6—but 1 out of 2, even though a die has six sides. Either the number you want comes up, or it does not. On a coin, either heads or tails must come up. All odds are 1 out of 2.

27. Misinterpretation Paradox: Any simple written or spoken statement can be easily misunderstood. The best example is the Bible where each verse is subject to many interpretations. Also, New York City is an example. That city (and others) is certain things to certain people. To some, it is only Broadway stage shows. To others, it is only porn. To others, it is only magic shops, or department stores, or restaurants, etc. How can one large city with so many attractions be only considered for one part of it?

28. Word confusion Paradox: Obviously, words like “right”, “wrong”, and “insane” could never have the same meanings to all.

29. Fire—not a solid, liquid or gas—but it exists. A real Dream-like thing.

30. Photograph/Mirror Paradox: If you have a ring on your left finger, it appears correct in a photo. But it appears the opposite, on your right finger, in a mirror. Yet a photo and a mirror are supposedly both reflecting you. So, photos and mirrors are dream-stuff. (Lewis Carroll was bothered by this too.)

31. Derelicts Paradox: Why so many bums, hoboes, homeless, street-sleepers? They are not LAZY because living that way is dangerous, nerve-wracking, difficult, full of tension—a much harder life-style than the so-called “working class”. It is hard work avoiding work. “Lazy bum” is a contradiction in terms.

32. Fictional Characters Paradox: Kilroy and Sad Sack were comic strip creations—but real-life people too. Writers and cartoonists claim their “fictional characters” take on a life of their own. Snuffy Smith took over the “Barney Google” strip, despite the artist’s attempt to stop him. Prince Valiant was supposed to be a strip about Vikings. But when he went to England it became a story about Knights and Camelot. Mickey Mouse was a non-humorous strip when it started. Popeye was not intended as humor. Bugs Bunny changed from a wild eccentric to a conservative home-dweller, etc. So, the dream-in-the-dream goes on.

33. No Past Paradox: It has been said, you cannot prove the world as we know it did not come into existence one second ago.

34. I wanted to write another Paradox here but this space is too small to write one in now that I have just used up the space writing this.

35. BEST "TWO WORLDS" PROOF! Your thoughts. They exist but are not material. How can this be? What is a "thought"?

36. Gravity Paradox: If there were 14.5 pounds pressure to the square inch of air, nothing on earth could ever weight *less* than 14.5 pounds. (You can put 50 pounds of air pressure in a bike tire—and yet the whole tire weighs only a few pounds.) Air pressure exists and does not exist at the same time.

37. Sleep Paradox: The "Dream" stops for people who are asleep. There is no scientific reason why people need sleep. The body rests and replenishes itself while awake. The only reason for sleep is so that the "Dreamer" does not have to keep showing "dream pictures" to all those who are asleep.

38. More on Proof #20: Exactly when did the English language become "Americanized"? Did Washington, Jefferson, Franklin and the others deliberately try to lose their English accents? Where did the frontiersman's Western "drawl" and mountain "twang" come from—and how soon after the American Revolution?

39. The Extremes Paradox: On this Nightmare World there is the super-rich and the super-poor. These two extremes are a paradox. Paradoxes prove the unreality of "reality".

40. Three Steps to Ending the Dream: 1. Logic. 2. Danger. 3. Free Flight. The 3 steps lead to one conclusion: there is a "touchstone" somewhere, accessible but not easy to get to. That is the key—The fail-safe system for ending the Dream. Is the Touchstone a rock, a mountain, a glacier? That is the current problem.

41. More about Proof 22: Besides certain people, objects can have dignity too. A diamond display at Tiffany's is decadent but elegant too.

42. Occultists and Mystics should have stumbled on the Dreamness of life years ago (Buddhists are close, but not convinced). To find the answer to this "mystery" everything must be considered and studied—the whole, not just some of its parts. Daffy Duck Comic Books, pebbles, a crumpled up tissue paper on the ground, is just as important as ancient mystical Books of "Secrets". All is one. The same blood in your small toe is in your heart.

43. There is a long history of occult and mystical meanings to the castings and sounding of big bells. Certain vibrations supposedly open doors to other dimensions. This is more proof that early America was involved with the Occult—besides that mysterious "eye" and that Pyramid on the dollar bill—the occult "Liberty Bell".

44. If the world were a globe, the people in Australia could never see the moon.

45. What is a "voice"? How can two thin strings of flesh produce different sounds by exhaling breath over them?

46. People sometimes confuse "creating" and "dreaming". Any one of us would have made this world much better

if we had carefully “created” it—but it was “dreamed up”. Dropping a tray of jars of different colored paints “creates” a mess—but you did not “design” that mess.

47. Another form of “Predestination” is when you do something you purposely tried not to do.

48. Socrates, Poe, Lewis Carroll, Mark Twain, and Daniel Galouye knew Solipsism. And of course Emily Dickinson too!

49. Latitude and longitude prove the Earth is flat. Such a system of measurement would be greatly distorted on a sphere or globe. It only works on a “flat” map, or a flat world.

50. Archaeology is what the Dream really was—if there were any other Past earlier than March, +1957.

51. Life is irony—the unexpected trick ending. “The butler did it”, the expert on auto safety has a driving accident, the lazy and mean prosper while the good are poor and unhappy. Only in a Dream can all this irony exist.

52. There are no TV satellites. Yet, “Telstar” was “built” because supposedly that was the *only* way to broadcast radio and TV signals “around” the curve of the Earth. But the Earth is not curved, as we have proved, so transatlantic radio and TV was always possible—with regular powerful antennas. Also, land-to-sea telegraphs and telephones were in use long before any fictional “satellites”—yet those signals had no trouble going around the so-called “curve” of the earth. P.S. there is no Telstar or any other “satellite” floating in “space”.

53. More on Proof 11—Boats: Water displacement is supposedly why heavy things float. Yes, water is “displaced” but that still does not explain *why* things float. When you walk on a lawn, you “displace” the blades of grass. Does this explain *how* you walk?

54. Waiting for the Dream to end is like waiting for the punchline to a joke. You know something funny is coming.

55. If there were really big telescopes that photograph “stars” billions of miles away, wouldn’t they have a super-closeup of the moon? Yet, there are no published photos of such a close-up view. Either there are these big telescopes and they have the close-ups but are not showing them to the public, or no such super-scopes exist.

56. When you feel as if Earth is just a small desert “town” you are whizzing through on a train in a few minutes—that is the beginning of understanding.

57. With an average pair of binoculars, the moon looks much larger—but not the “stars”. They do not look the slightest bit bigger or clearer. Why? Because they are made of Star-Dreamdust!

58. When Doc Savage was at his “Fortress of Solitude” he was feeling solipstic. He was not studying—he was brooding.

59. Advanced chemistry shows matter is made of dream-stuff. Advanced studies in physics and electronics have the same results.

60. I can think of no way to live on this Nightmare world other than as a stoic or a savage.

61. More on Proof 27: There are 3 types of Predestinations: (1) "Guardian Angel": a secret unknown person who helps you throughout your life—getting you good jobs, money, etc. (Example: Magwich to Pip in *GREAT EXPECTATIONS* by Dickens.) The "angel" could also be a constant evil influence on your life—always ruining your plans. (Shaver's "Deros", or the so-called "Kennedy Family Curse".) (2). "No Choice Predestination"—victim of circumstances, cause and effect—you are here where you are today only because of what happened to you yesterday—(see Hubbard's *MAN AS DNA*.) (3). True Complete Predestination—everyone except the Dreamer are "robots" acting out commands programmed into them before the Dream—all for the Dreamer's amusement—to avoid boredom. Of course, when the Dreamer became a character in the pre-planned Dream, he "forgot" he created it all.

62. Only Predestination can explain "hunches", "muses", "insights", and "déjà vu". Every word and thought we speak is pre-destined. "Dé Já Vu" is the same thought "shot" into our minds twice—instead of once. "Insight" is the "ah-ha!" syndrome—where an idea "dawns" on us without a previous cause. "Muse" is the "inspired" poet or artist who "creates" a work.

63. You Philosophers and Mystics believe that "Nirvana"—or the True Enlightenment—is like stepping from a hot, humid day into an air-conditioned room—where you must exclaim: "Ah, this is wonderful!" I believe we are *already* in that glorious air-conditioned room—and that just only once in awhile we open the window, let a little of the hot, humid air outside come in and say: "Oh, how terrible it is outside today!—but if I do not open this

window *sometime* I will never see my beautiful flower garden outside." Our "room" (Nirvana) is pure comfortable bliss—but it is empty—and boring. The beauty, horror, excitement and action is all "outside" in our hot, humid "yard" (this fake dream world).

64. Let's make this clear: there certainly may be *real* UFO's—from the Governments of various countries on Earth—from private individuals on Earth—or from mysterious non-human entities in a secret place on Earth—but that still does not mean the U.S. Government encourages all "sightings" to get public sympathy for Space Programs.

65. Does rain fall from six different directions? It would have to, if the world were round like a ball, wouldn't it? Obviously rain falls only DOWN—on a flat Earth—on all the continents or else how would Australia and the tip of South America ever get rain? You have never seen rain falling sideways or upside down, have you?

66. Jean Picard (d. +1682) was simply in error when he claimed to have measured the length of a one-degree arc of the Earth's surface, wasn't he?

67. Pierre Maupertuis, who in +1738 discovered the Earth was very flat at the poles, was on the right track, wasn't he?

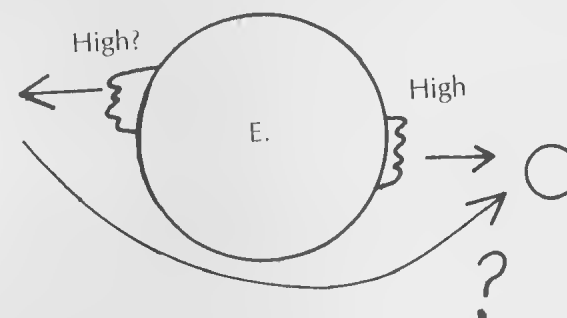

68. Doesn't the "Aclinic Line"—the "magnetic equator"—where a compass just does not work—prove the Earth is flat? Isn't this another case of "you can't have it both ways"? If the Earth is a "ball", and the whole idea of a compass is that the "lodestone"—or iron core—at the Earth's center is the attraction for your compass—then

there *cannot* be an “Aclinic Line”. But since there *is* the Aclinic Line . . . ergo, hence, therefore . . . the Earth is you know what.

69. Do you know about the Michelson-Morley Experiment? Albert Michelson made a device called an “interferometer” in +1881 which split a beam of light in two parts, and then brought them back together again. Because Al assumed the Earth is spinning (1,000 miles per hour!), he felt the solid substance of Space called “ether” would produce some sort of interference (“drag”) effect when the two beams were brought back to one. But guess what? His device showed no “drag” effect! Al really proved the Earth is NOT spinning! But he did not look at it that way. He later improved his device with E.W. Morley, did the experiment again, and there still was no “drag” interference effect. So instead of coming to the correct conclusion, the two scientists came to the opposite one—there is no “ether”—or solid particles—in Space. Of course there really is an “ether” and the Earth is NOT spinning. Michelson and Morley’s device worked and proved it. So in +1908 Al Michelson received the very first Nobel Prize for really proving the Earth is not spinning.

70. As if I didn’t give you enough proof the Earth is “flat” (the land masses are laid out in a circle, so it is round like a pie but not round like a ball) regarding the Aclinic Line—here is another proof: High Tides. First of all, there is no proof the “Moon” causes high tides—there are too many “irregularities” with many bodies of water that do not respond to the Moon’s supposed “influence”—which Official Science explains away by saying it is due to weather, whirlpools, storms, irregular coastlines, minor sea-quakes, etc.—but regardless, most Official Science states

that when the Moon causes a high tide, there are *two* of them—one on the side of the ball-shaped Earth facing the Moon—and the other on its direct opposite side, the other side of the globe. That is the proof the Earth is not a globe or “ball”. How can the magic “suction” Moon rays which lift the water levels on the side facing the Moon—bend, twist, and go around the “ball”—to cause high tides on the opposite side of the “round” Earth? Another case of “You can’t have it both ways”, isn’t it? It is one thing to say the water directly facing the Moon is being effected—but it is simply illogical to say the opposite side of the ball is effected in the opposite way.

Isn't it?

By the way, you do understand that because there really are different time “Zones”—that proves the Sun really is much *smaller* than the Earth and *it is* moving from East to West across a *stationary* Earth? It is 4 minutes later for each “degree” the Sun moves—so it is just like you shining a hand flashlight around your room. If the Sun were a billion times larger than the Earth (as is the “Official” opinion, for some reason) then naturally there would be no such thing as a Time “Zone”—a point where the Sun is exactly overhead. When the Sun is overhead—

“noon”—where you live, it is not overhead miles away East and West of you. If the Sun were bigger than the Earth, it would be “noon” all over it at the same time. (Like shining your flashlight on a pea or “BB”.) But, there *are* Time Zones. Time Zones prove a small, moving Sun across a flat, stationary Earth. Why *does* the Government keep this all a secret and why must schools teach “the Earth is a round ball spinning 1,000 miles per hour”? Why not just tell the truth? Obviously, there are reasons. One of them is that a flat (round like a pie, not like a ball) Earth with a “North Pole” center and a “South Pole” outer crust around the edge of the “pie”, will lead to investigations of what is *beyond* that outer “pie crust”. The Government (The Secret Nine Unknown!) do not want that investigated, for some reason. They also don’t want investigations into the “Hollow Earth” opening somewhere near the “north Pole” region. Also, there is the “Pizzaro Syndrome”. Francisco Pizzaro (d. +1541) was the famous Spanish conquistador. He was a cruel sadistic killer. Besides killing all the Inca Indians who greeted him in friendship in South America, he also killed his own Spanish friends and partners when they objected to his cheating them. But the oddity is, Pizzaro had a lisp. He pronounced his name “Path-aro”. He killed anyone who did not pronounce his name with a lisp—instead of with the strong “z”—“Pizz-aro. Obviously, so many world leaders were forced to verify a round, spinning Earth, they would look like fools to now admit the truth.

George Washington and the original “founders” made the “spinning ball” the Official Version. The puppet figureheads (all the following U.S. Presidents) were forced to constantly re-state and re-affirm the “Official” (lie) Version. They obeyed. In other words, they continued to pronounce “Pizzaro” as “Path-aro”. Just as Pizzaro would

kill anyone who did not lisp—pronounce his name *incorrectly*—so the first Founders will kill (or remove) any world leader who did not give out with the *incorrect* facts about the Earth. Of course, you have already read the main essay on these ideas in this Work, right?

So if Elmer Fudd threatened to kill you if you didn’t talk like him—say “wascally wabbit”, etc.—would you?

71. Danish scientist Tycho Brahe proved Copernicus wrong about the Earth moving around the sun, didn’t he?

72. Near-sighted people know the Moon is a light. Do you know how they know? (Write me for the answer.)

73. Other Planets APPEAR round—Earth must be too! Isn’t that a fine example of conclusion-jumping?

74. William Ferrell (d.+1891) came up with “Ferrell’s Law”—winds are affected by the Earth’s rotation. His “Law” has been disproved, hasn’t it?

75. How do astronomers explain the stars they call “variables”—the ones that are constantly changing their degree of brightness? Doesn’t this disprove any so-called “method of measurement” Science has regarding these stars’ distance from Earth?

76. Suppose we put a small mark on the floor in front of us. We walk a few feet away. We can still see the mark. We probably can see the mark from 15 or more feet away. But eventually, in a few more feet, we will no longer see the mark, simply because of the angle and distance we are from it. Doesn’t this explain why from an airplane objects we pass way below us are *not* “behind” the “curve”

of the Earth—but just out of eyesight—though still on the *flat* Earth surface?

77. Jean Foucault (d. +1868) invented the Foucault Pendulum to prove the Earth is really rotating. How come he was wrong, anyway?

78. Yuri Gagarin, the Russian astronaut, supposedly the first man in space, died in a mysterious plane crash in +1968. Why? Was he murdered because he was about to make a public statement that both the Russian and U.S. Space Programs are complete hoaxes—and ALL space travel is impossible? (Is that why Gus Grissom and the 7 civilian “Shuttle” passengers were in fatal “accidents” too?)

79. Speaking of the “Moon Landing Hoax” of July, +1969, whatever happened to all those vacation trips that were planned for the Moon? People pay \$10,000 for a round the world trip on a cruise ship. Wouldn’t they easily pay that amount—or much more—for a trip to THE MOON? Even just a fly-by without a landing would be a fantastic profit-making scheme for any private company or even the Government, wouldn’t it? Why no Moon flights for the public? Why no even casual talk about the Moon today in early +1988? The answers to those last two are obvious, aren’t they? Doesn’t the fact that everyone seems to have “forgotten” this “Great Event” prove also it is a hoax?

80. How do you KNOW you are not the only sane human in the world and all the rest of us are Demons who live only to torment you?

81. Did you see that white “dot” on the moon the nights of 1-16-68 and 3-14-68? Did you see that blue “blister” on the moon on the night of 10-2-87?

82. What happened to all those mysterious “meteorites” Robert E. Peary supposedly discovered on the coast of Greenland in +1896?

83. The alleged UFO that crashed with the humanoid pilot in +1897 in Aurora, Texas, was on the property of a man named Proctor. The alleged UFO that crashed with its humanoid crew in +1947 in Roswell, New Mexico, was near the property of a man named Proctor. Coincidence? The word “proctor”, of course, means “guardian” or “witness”. Hummm?

84. The six month long arctic day and then equal length of night proves not only the Earth is *not* rotating—but that the sun is the moving “light”—and a very small one at that, right? (When *it* moves away, Night exists.) Can you see this situation can only happen on a flat, non-“ball” planet? By the way, why, if all ice bergs are composed of fresh water, they are only found floating in the salt water seas? Are ice bergs formed in a mysterious “Hollow Earth” river?

85. Can we prove the Earth is *not* “spinning”? Suppose we place a bar magnet in the ground and suspend another magnet with its opposite “pole” just above it, so that one is actually floating in mid-air. (You can buy these trick magnets at science or hobby shops.) Then if the Earth moves, the upper floating magnet will fall, right?

86. Mathematics, like thoughts, are things that exist and do not exist at the same time. Are mathematicians solip-sists?

87. Was the July +1969 "Moon Landing" really filmed at CRATERS OF THE MOON NATIONAL PARK, Idaho? (The "astronauts" admit training there!)

88. As you so well remember, earlier we asked how could radio (or tv) waves or signals be picked up on many receivers all at the same time and same strength. The standard "scientific" answer to this is, of course, that "radio waves are like the ripples in a pool of water when a stone is tossed in—they radiate out from the source in a circular motion—so any receivers anywhere encircling the source will pick up the waves". Oh really? No other form of electrical waves travel in such a "convenient circular" pattern—why should radio and tv waves? Normal sound waves travel straight in one direction—from Point A to Point B. That is why you can't hear some people talking softly if they are not facing you. (That's why megaphones work.) Household electric current travels only in straight lines—through wires, right? Static electricity travels in straight lines. Telegraph and telephone sound "waves" travel only straight, point to point. So the "circular ripple" effect of *only* radio and tv waves are—shall we say—a THEORY!? Or, have you personally *seen* these "waves" travel like water ripples?

89. Scientists used to say the atom was the smallest particle of matter. Then they found the atom had a center called the nucleus. Then they found that the nucleus is really made up of two separate parts—the proton and the neutron. But now it turns out these two "parts" are not even solid, and are made up of countless smaller parts—

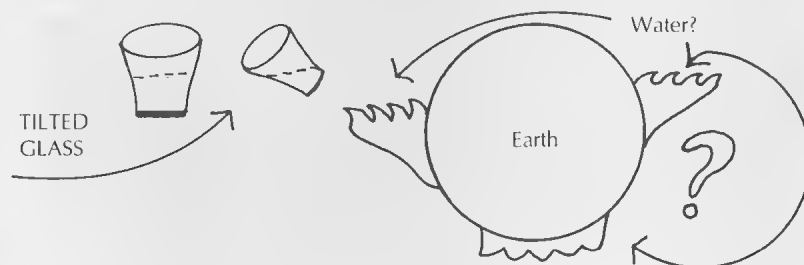

which are not solid either—and each of those smaller parts are not solid. So, what's the matter with Matter? And isn't the only logical response to all of this just to say: "Humph!"?

90. Do you really believe zillions of planets are zipping around all over the place without boinking into each other?

91. Doesn't Kurt Godel's Theorem disprove all mathematics and logic, thereby proving life is a dream?

92. There is another oddity connected with the subject of pro wrestling. Wrestler Fritz Von Erich had four sons, each of which was also a wrestler in the early +1980's. David, the second oldest, died in his 20's. Mike, the youngest, died two years later. The oddity is, everytime Mike wrestled, the announcer constantly compared him to the late David—in physical appearance, temperment, and wrestling style. The early death was a fourth comparison, of course. More cruel irony on the part of the Dreamer? (See Remarks #15 & 24).

93. Water seeks its own level. Tilt a half glass of water to any side, the water remains level. Since all the large bodies of water on the Earth remain level, the Earth cannot be a "ball". How could water remain level while clinging to the sides of a ball (much less underneath it)?

HUMOR

"Humor?" said The Dreamer. "You want to know what Humor is?" I will explain. First I will create a human being and then I will create a whole world for him to live in. I will fill the world with very good things—and very bad things. Naturally, the human will strive for the good things—but here is where I will fool him. Whenever he is just about to grasp, savor, appreciate or enjoy anything good—it shall instantly dissolve into nothingness and leave him wondering why he ever sought such a tissue of nothing in the first place! I will create 100 temptations a day for him. But all he will get will be 100 frustrations. I will give him many toys and books—but he will lose interest in each toy almost as soon as he obtains it. Each book he reads will contain only the barest hint of "good things" which will all seem so close at hand to him. But, as soon as he tries for them, they will also become nothing—wisps of nothings, to be exact. All about him he will see other dream-things he will *think* are also humans like himself (they are not, of course). He will see many of these "humans" happy and content. But since these other "humans" do not even exist, their "happiness" does not exist either. Again, the one real human will be in a constant state of frustration and irritation. I will also show him some dream-"humans" in what is *apparently* a worse state of affairs than he is in—I will show him starving masses in other lands, terribly crippled or tormented "people", wretched, poor, miserable, cold, wet, and hungry "persons". All these unfortunate "beings" will make the one true human feel that he is "really not so bad off after all". How wrong he will be when he thinks that! Since all those so-called "unfortunates" do not even exist, their unhappiness does not exist either. But the frustration and torment that this only true human feels does exist

because *he* exists. Whatever this human strives for will vanish like mist. Do not forget the equation: 100 temptations per day is equal to 100 frustrations per day. And like a good fisherman I will "give him a little line"—let him achieve the slightest iota of "happiness"—but then I will pull back hard and watch it slip from his clutch. This one true human on the dream-world (I will call "Earth") will experience exquisite torment indeed. And, as a bonus, I will give him one drop of liquid intelligence—only one drop, mind you!—just one drop of inherent sagacity and wisdom to let him *suspect*—someday—just exactly what I have done. It will let him suspect the truth—but never allow him to "prove" it to himself or anyone "else".

Now that, my friend, is Humor—that is funny!
